

Setting-up the Grey “Go-Display” Boards

1. Ensure you take
 - 1) the small bag with the bases and
 - 2) the large bag with the boards and poles.

Note: the bag of bases is HEAVY.

2. Open both bags and take out the contents.

3. Place the bases on the floor and screw in the poles until they are tight

4. Decide on how you want to set them up.

Or centre pole and boards placed radially—diag on right as from above

Or any combination that will suit your needs

5. Take the brackets and ensure that the screws are level with the surface of the bracket; it just takes longer to tighten them if not!

6. Fix the brackets with Pegs upwards on the poles so that the bottom of the bracket is in line with the mark on the pole – for top landscape configuration. Tighten the bracket.

7. You will need the assistance of a second person for this stage:
Place a board on to the lower peg

and then fix the top of the board by securing another peg downwards.

This is done by sliding the peg bracket into the groove of the pole and catching the peg in the top of the board. Then with the board angled sideways, tighten the screw in the bracket.

8. If the brackets are fully down or at the top they do not need tightening.

9. Fix the other end and other boards similarly.

10. The boards can be set up between poles or with the boards radiating from a central pole.

11. Only use hooked Velcro to attach items to the boards.

12. Ensure that all items are put away for transport. If the brackets remain locked after the screw is loosened, just apply pressure to the bracket to loosen it. Return the brackets to the zip bag with these instructions and place with the boards in the large bag.

If you have any problems please call Community Action Fareham 01329 231899

Velcro Hook tape is available for £1 per m from Community Action Fareham.

Please report any damage of missing items when you return the boards.
